

1-port optical switch

Overview

1X1 Fiber Optical Switch connects optical channels by redirecting an incoming optical signal into a selected output fiber. The 1x1 Opto-Mechanical Optical Switches consists of 1 input and 1 output fiber ports that selectively transmits, redirects, or blocks optical power in a fiber. A fast switching, non Latching Mems module available in a wide range of operating wavelengths, up to 2000nm. 1x1 2000nm - Also options with 780nm, 850nm, 980nm, 1064nm, 1310nm, 1550nm. We lead the industry in optical switch technology, delivering the lowest insertion loss (0.2 dB), fastest switching speed (10 ns), broadest wavelength range (300–2400 nm), widest fiber compatibility, highest optical power handling (50 W), and space-qualified reliability. The standard units are. Fiber optical single mode (SM) switches are primarily used in the telecommunications field and network technology as well as to connect several light sources with one detector or one source with several detectors. The array of products at LASER COMPONENTS ranges from channel type 1x1, which is a.
