

32-head aggregation switch

Overview

With a robust capacity of 800 Gbps switching capacity and 1.6 Tbps non-blocking switching throughput, it ensures efficient data transfers without bottlenecks. This switch provides extensive support for VLANs, ARP entries, and static IPv4 routes, making it suitable for complex. Optimizes critical services with QoS, traffic shaping, multicast support, and ISM VLAN for enhanced efficiency. The SIM feature enables managing multiple switches as a virtual stack with a single IP, supporting diverse management tools. AC or DC RPS options ensure uninterrupted operation and boost. Enterprise SONiC based 32 port 100G QSFP28 aggregation core switch for aggregation spine architecture, which line rate L2 L3 up to 3.2 Tbps, Marvell Falcon, ROCEv2, EVPN, Multi-homing supported. As a 10G switch with full SFP+ ports that seamlessly integrates into the Omada Software Defined Networking (SDN) platform, SX3032F allows for remote and centralized management, anywhere, anytime. Faster replacement and priority support, covered for 5 years. An aggregation switch is a network device that consolidates traffic from multiple access switches, wireless access points, or other edge devices and forwards it to core switches or routers. By bundling multiple network connections into a single high-bandwidth link, aggregation switches help. s data center environment. 0, enterprise, mid-market and cloud service providers with demanding compute and st sensitive to packet loss.
