

35kV busbar CT polarity

Overview

Each CT has a polarity mark—usually denoted as P1 and P2 on the primary, and S1 and S2 on the secondary. In this guide, we will explore everything you need to know about CT polarity in the context of differential protection. Interlocking and overcurrent differential protection can be implemented with any suitable. The following diagrams show the effect of three different CT polarity and star side policies used by Australian utilities as applied to a incomer and outgoer of a busbar and a fault on the outgoer. They are all "correct" i. Busbar protection (BBP): Protection intended to detect and operate to clear faults on a busbar. The angle differences of during fault and prefault current signals of incoming and outgoing CTs are the indicators of external or. Hi Typically with low impedance busbar differetial for example GE B30 or B90, CT ratio can be different. While configuring the relay you can enter each Different CT ratio.
