

AI terminal is a server

Overview

AI Terminal is an open-source CLI AI agent that integrates large language models into your terminal workflow. It allows you to chat with AI in real time, generate code snippets, craft SQL queries, perform HTTP requests, and execute shell commands directly from prompts. We provide four examples to help you set up your MCP server in different environments. The table below summarizes each configuration: If you enjoy learning about. The system provides two parallel server implementations—a STDIO transport for local process communication and an SSE (Server-Sent Events) transport for web-based streaming—both allowing AI assistants to run shell commands in an isolated workspace directory. This Home page provides an overview of. Navigate the command line with confidence. ai-terminal is your intelligent assistant that helps you work faster and smart Your browser does not support the video tag. Download and start building immediately. Downloads: 0 | macOS: 0 |. Playground deep LLM x MCP experimental field, demonstrating the potential for integrating large models with external data! An MCP server providing persistent terminal sessions with TUI app rendering, interactive prompt navigation, and screen content reading, designed for AI agent command-line. Terminal MCP is an MCP server that gives AI assistants a real-time view of your terminal session.
