

Austrian Pluggable Optical Module OSFP

Overview

The OSFP MSA roadmap provides an excellent mechanical and electrical solution for 800G, 1.2T pluggable optics with best-in-class thermal performance and support for break-out applications, making these form factors a great choice to deliver the next-generations of. The OSFP MSA is proud to introduce OSFP1600 and OSFP-XD to the industry. This whitepaper highlights the key aspects and features of each solution with the expectation that both solutions will have a place in future data center applications. The OSFP-XD solution has attracted significant interest in. While the industry-standard OSFP (Octal Small Form-Factor Pluggable) module has successfully enabled 400Gbps, 800Gbps, and 1.6Tbps optical pluggable modules, it is limited to 32 modules per Rack Unit (RU), typically requiring 2 RUs to achieve 102. Unlike the backward-compatible QSFP-DD, OSFP introduces a slightly larger mechanical form to. GIGALIGHT provides the smart box tools for online coding of SFP, XFP, SFP+, QSFP+, and QSFP28 optics, as well as wavelength tuning for 10G tunable XFP/SFP+ optical transceivers. Each module needs a small but precise set of support ICs — multi-voltage conversion, hot-plug load switching, rail supervision, and signal level shifting.
