

Buying an outdoor server rack

Overview

This buyer's guide covers what an enclosed server rack actually is, how to size and specify one, the cooling math you need to avoid the most common failure mode, IP-rating decisions for outdoor and industrial deployments, and how to read the specs of the major brands. If you're installing networking or IT gear outdoors—like cellular backhaul, public Wi-Fi hubs, traffic control systems, or remote surveillance servers—you need a rack that survives rain, dust, UV exposure, and temperature swings. Over the past year, demand for IP55-IP66-rated outdoor server racks. An enclosed server rack is a four-sided cabinet — solid side panels, lockable front and rear doors — that houses 19-inch rackmount equipment in a single sealed body. Compared with an open-frame rack, it adds physical security, dust protection, acoustic damping, and managed front-to-back airflow. Output Volt-Amps (VA) is a measurement of electrical power and is used to size a UPS system for the equipment that will be connected to it. These are manufactured from galvanized steel, aluminum or stainless steel material, making them the perfect layer of security.
