

# Cable tray sagging at a right angle

## Overview

It usually comes down to one (or a combo) of the following: lack of proper support spacing, overloading the tray, incorrect installation, or cables simply being too loose. In short, poor cable management is the culprit, and your network cabling infrastructure deserves better. When a load is more than the structural capacity of a cable tray, it bends between supports. Here are main approaches to either fix or stop drooping: 1. Although. How to Solve Cable Tray Sagging   Read Full Guide: <https://lnkd.>  Practical corrective actions. Usually we provided support to cable tray every 3 m, If. The cable follows the shape of a parable and the horizontal support forces can be calculated as  $R1x = R2x = q L^2 / (8 h)$  (1) where  $R1x = R2x =$  horizontal support forces (lb, N) (equal to midspan lowest point tension in cable)  $q =$  unit load (weight) on the cable (lb/ft, N/m)  $L =$  cable span (ft, m)  $h.$
