

# Computer Room Enclosed Cold Aisle System Solution

## Overview

Cold aisle containment systems use doors at aisle ends, ceiling panels or lids above racks, and structural frames to create enclosed zones where cold supply air flows directly to IT equipment intakes. Without containment, cold supply and hot exhaust air mix throughout the data. Tate's Cold Aisle Containment (CAC) system efficiently captures cold air from the CRAH or CRAC unit via an underfloor plenum, ensuring the I. T equipment is kept at an effective temperature. Designed to your specification, it can be custom configured to fit any white space layout, enabling a precise. Armstrong aisle containment combines flexible design, strategic sourcing, and American manufacturing to deliver solutions that ensure long-term performance in a rapidly evolving digital world. Rittal Aisle Containment Solutions Provide: Our Containment line reduces costs by up to 30% with an ultra-efficient design.
