

Distance between distribution box switch

Overview

Distribution box and switch box should not exceed 30 meters. Generally, distribution boxes can be divided into three levels of secondary protection, that is, three levels of distribution boxes: general. Working space: The front clearance, side clearance, and height clearance requirements for electrical equipment that provide a safe area for maintenance, inspections, and other work. Switchboards must be located and installed with adequate space, ventilation, and accessibility to prevent overheating, facilitate easy maintenance, and ensure safe emergency. The distribution box on the construction site shall be equipped with outdoor general distribution box and distribution box, which shall be distributed according to three-level distribution and two-level leakage protection distribution; 2. 26, these rules define the minimum Spaces about electrical equipment necessary for workers to perform tasks like inspection, maintenance, and replacement safely.
