

Do all electrical box switches have covers

Overview

All electrical panels require a cover, called a dead front, to prevent touching any of the electrified (“live”) parts inside. Electrical boxes are protective enclosures used to contain wiring, connections, switches, outlets, and light fixtures. They come in many different types, each designed for a specific purpose—such as wall outlets, ceiling lights, junction connections, or outdoor installations. These covers fit and close existing boxes and covers to support electrical devices, such as switches or receptacles. Properly finishing these boxes integrates necessary utility components into the home environment while securing the electrical. Choose from our selection of switch covers, including metal outlet boxes and covers, plastic outlet boxes and covers, and more.
