

Elbow next to cable tray

Overview

Cable tray elbows, tees, crosses, and reducers are essential fittings used to maintain the proper routing and support of electrical cables within a tray system. Elbows are directional changes, typically 45 deg or 90 deg, used to navigate corners horizontally or change. The main types of accessories are categorized by their function: Fittings change the path or size of the run, including Elbows (for horizontal or vertical direction changes), Tees and Crosses (for multi-directional junctions), and Reducers (to transition between different tray widths). The Ladder Tray features light, rugged, tubular steel construction. It is designed for. A range of nearly twenty fittings makes the system customizable, accommodating any kind of tricky configuration. Standard 12", 24" and 36" radius are available for all fittings. These systems have 1 1/8" wide side. When developing our cable support OBO can offer reliable solutions for systems, three attributes are at the routing and fastening cables securely core of what we do: efficiency, resil- for each of these installation challeng-ience and safety.
