

Fiber Optic Cable Test Data Report

Overview

[Click here to download a sample LinkIQ™ Cable + Network Tester report file.](#) Looking for info about LinkIQ test reports?

Two primary instruments used are the Optical Loss Test Set (OLTS) and the Optical Time Domain Reflectometer (OTDR). Each serves distinct purposes in ensuring the integrity and performance of fiber optic networks. An Optical Loss Test Set (OLTS) measures insertion and return loss across fiber links. If the network fails to perform as contracted and reported, the network provider must be able to test the network to pinpoint the. ic system. KITSTM dramatically improves testing productivity, lowers skill level, minimises errors and enhances report customizing capability. As the components like fiber, connectors, splices, LED or laser sources, detectors and receivers are being developed, testing confirms their performance specifications and helps.
