

# Fiber to the Home Wall Panel

## Overview

The fiber wall outlet (also known as fiber wall plate, faceplate, or rosette box), is a compact surface mount box designed for FTTH (Fiber to the Home) networks. It serves as a termination point between drop cables and Optical Network Terminal (ONT) devices. These panels not only bring sophisticated visual texture but also deliver notable acoustic and maintenance benefits—attributes. As FTTH (Fiber to the Home) deployments accelerate worldwide, ensuring a clean, secure, and professional fiber entry point inside each home has become essential. According to FTTH Council Europe, standardized indoor fiber outlets like 86-type faceplates are key to accelerating smooth last-mile FTTH. Telegärtner offers a fast and easy to install Fiber-In-The-Home system especially for retrofitting or upgrading of a fiber optic cabling in houses, apartments and residential units. Thanks to the preconfigured FITH OAD/S connection. TECTUM Wood Fiber Walls FAQs: How do TECTUM wall panels improve acoustics?

TECTUM panels absorb sound energy at the wall surface, helping to: Depending on configuration and mounting, panels can achieve NRC values up to ~0.00, making them highly effective acoustic solutions. The enclosure integrates fiber. Wall mount fiber patch panels support two primary connection methods, each with unique advantages for different applications: Splicing involves fusing an incoming fiber cable to a fiber pigtail (a short fiber with a pre-terminated connector) using a fusion splicer.
