

How to install a heat shrink junction box

Overview

This document provides instructions for the installation of a heat shrink joint suitable for single core 36kV XLPE armoured and non-armoured cable. Heat Shrink & Tin Tutorial. more Insulate and Protect Cable Connections in a Junction Box. Heat Shrink & Tin Tutorial Nexans JTS range of Heatshrinkable MV Cable Joints consists of high performance, compact and easy-to-install Straight Cable Joints with Triple Wall Tube Technology. This technology allows installers to heat only one tube instead of three for 12 to 24kV applications, and two tubes instead of three. Heat shrinking wire connectors involves sliding heat shrink tubing over the connection, applying controlled heat (typically 200-300°F) using a heat gun or hair dryer, and allowing the tubing to contract around the wires for a secure, weatherproof seal. With the bus wires pointing up, use pliers to grab hold of the edge 3/4" of the cable where the bus wire is located and pull downwards.
