

Multimode pigtail and optical cable cannot be connected

Overview

A: Generally speaking, the answer is "no". For example, 1000BASE-LX single mode SFP can work on multimode fiber cable by using mode. For multimode check the light, make sure Rx and Tx are connected properly. Multi-mode optical cables has wide fiber core 50 μm for OM4 (your case), In contract - single mode optical cable core is narrow - 9 μm . This leads to unreliable network performance. Here's why: Light source & beam profile: SM lasers are narrow and Coherent; they couple efficiently into a 9 μm core. MM VCSELs/LEDs produce a broader beam. A fiber optic pigtail is a short, usually unjacketed, optical fiber cable that has a factory-installed connector on one end and a length of exposed fiber at the other. The connector end can be linked directly to network equipment, while the exposed end can be spliced to another fiber optic cable.
