

Optical Transmitter Module DMP

Overview

Fiber optic Transmitter components are used in gigabit Ethernet, SONET/SDH, ATM, and fiber channel applications with bandwidth of 155 and 622 Mb/s or up to 1. The package size of optical transmitter modules are compact with a uniform outline of approximately. The Transmitter Optical Sub Assembly (TOSA) is responsible for the emission of light. Its primary function entails converting electrical signals into optical signals. This assembly comprises a light source, such as a laser diode or a semiconductor light-emitting diode (LED), an optical interface, a. An optical module is a typically hot-pluggable optical transceiver used in high-bandwidth data communications applications. Optical modules can range in. Mostly, OFC (optical fiber communication) plays an essential role in the telecommunication system development with a high speed as well as quality. Cisco offers a range of GBIC, SFP, XFP, SFP+, CXP, CFP, Cisco CPAK, and QSFP+ pluggable.
