

# Overview of the Energy Internet

## Overview

The Energy Internet is a proposed framework for maximising the efficient collection, distribution, and management of energy sources using networked computing and communication systems. In the 1970s, the concept of Energy Internet began to emerge. Its features, such as plug-and-play mechanism, real-time bidirectional flow of energy, information, and money can lead to significant benefits and innovation in electricity production and. Energy Internet, sponsored by Chinese Society for Electrical Engineering (CSEE), and published by China Electric Power Research Institute (CEPRI) in cooperation with the Institution of Engineering and Technology (IET), is a multidisciplinary gold open access journal covering power and energy, power. Extensive electrification based on renewable energy sources is seen as one of the most potential growth options to tackle these issues in the medium to long term.
