

Selection of Stainless Steel Channel Cable Trays

Overview

It works for places with no corrosion risk. Most people use this type of stainless steel cable tray. To ensure that your channel tray installation will meet your present and future needs, a sequence of decisions must be made. These decisions are relatively simple and can be condensed down to four steps. Material choice T&B channel tray systems are fabricated from a corrosion-resistant metal. We offer a wide range of cable tray systems to support tubing, electrical cables and instrumentation. Our cable trays are produced in fit for purpose materials like stainless steel, galvanized, aluminium and fibreglass (FRP/GRP) composites to suit any project type both offshore and onshore. Stainless steel cable trays have sturdy structure, resist rust and they are specified for cable containment and cable support in oil, gas, petroleum. Cable Trays are designed to meet most requirements of cable and electrical wire installations and comply to local and international standards of fabrications and finishes.
