

Should butterfly-shaped optical cables be used outdoors or indoors

Overview

Indoor cables are ideal for controlled environments, while outdoor cables offer durability and protection against extreme conditions. These cables are a type of fiber optic cable specifically designed for use in FTTH networks, where they play a crucial role in delivering high - speed. An indoor butterfly-shaped optical cable is a type of fiber optic cable designed for indoor use. It is named after its unique shape, which resembles that of a butterfly. 87, IEC 60794, and ISO/IEC 11801, these cables differ in jacket materials, mechanical protection, water-blocking structures, allowable bend radius, and. However, when it comes to choosing the right fiber optic cable, many overlook the crucial distinctions between indoor and outdoor applications. Flexible and Lightweight: Easy to route through walls, ceilings, and floors.
