

Standards for the Transportation of Optical Fiber Cables and Cables

Overview

Supplement 47 to ITU-T G-series Recommendations provides information on the general transmission characteristics of single-mode optical fibres and cables specified in the ITU-T G. Relevant electrical hazards are also discussed. 984 standard defines protocols and procedures for efficient operation and management of fiber networks, especially in GPON systems widely used in FTTH (Fiber to the Home). 3-E “Optical Fiber Cabling and Components Standard” was developed by the TIA TR-42. Scope: This Standard specifies performance, transmission, and test and measurement requirements for premises optical fiber cable. Industry standards for optical fiber cables, components, systems and applications continually evolve and progress in an effort to ensure interoperability, performance, uniform testing and support for the latest technologies, bandwidth demand and industry initiatives.
