

# Terminal box fusion splicing 96-core

## Overview

The fiber splicing, splitting, and distribution can be done in this box, and meanwhile it provides solid protection and management for the FTTx network building. □ Water-proof design with IP-68 Protection level; □ Integrated with flap-up splice trays and adaptor holder; This splice closure is widely used in FTTH outdoor harsh environment, so each port with blocks, rubber seal or grommets, all good seal performance IP68 protection level, good choice for underwater. CABLE ENTER Feeder cable connect with internal part by 2 types of cable ports: Cable Glands\*2: IP68. ODF unit box is a high-density, high-capacity design product, with good looks generous, reasonable distribution, easy to find, easy management, easy installation and good operational ect. ODF unit box can be individually equipped with fiber optic distribution frame, but also with the digital wiring. Serves as a central hub in large-scale FTTH networks, enabling high-density fiber fusion (48/96 cores) and patching (12 SC adapters) for residential complexes, commercial districts, or industrial parks. Suitable for outdoor installations (exterior walls, utility poles) or harsh indoor environments. The equipment designed from NEATEL is used as a termination point for the feeder cable to connect with drop cable in FTTx communication network system. Designed for both efficiency and durability, this closure is a effective solution capable of handling up to 16 subscribers and 96 splicing points.
