

The cover of the electrical distribution box cannot be stuck

Overview

The bottom hole needs to be either pushed towards the house or shifted to the left, if I recall correctly. Additionally, you should lower the cover by about 1 inch. This adjustment will allow it to swing open. To close it, swing the door shut and then slide it up; it will lock into. If your outdoor electrical breaker box cover will not close all the way, the most common causes include misaligned hinges, protruding internal wiring, or a warped latch mechanism. Ensuring the door is fully sealed is critical to prevent moisture ingress, corrosion, and potential electrical fires. Do you have any suggestions on how to open it?
