

What does 100 Mbps or 1 Gbps mean in a fiber optic switch

Overview

100 Mbps (Megabits per second) refers to a speed of 100 million bits of data transmitted in one second. The difference between megabits per second (Mbps) and gigabits per second (Gbps) is the number of bits (that is, the amount of information) you can send and receive each second. In the days of dial-up, modem speeds were usually measured in kilobits per second (Kbps), like 28. Modern-day Gbps is faster than Mbps, and exactly 1,000 Mbps equals 1 Gbps. This definition follows the International System of Units (SI), where: Mbps vs Gbps: What's the Real Difference?

Although Mbps and Gbps measure the same thing—data transfer. Mbps and Gbps measure internet speed, not file size, and understanding this difference helps you choose the right plan. Mbps speeds are ideal for everyday browsing, HD streaming, and video calls, offering reliable performance at a more affordable cost. Bottom line: Mbps vs Gbps isn't just about bigger numbers —.
