

What to do if the electrical distribution box is near the front door

Overview

There must be 3 feet of clearance in front of your electrical panels, and the door must be able to open at least 90 degrees. Move any boxes or objects that obstruct your view. Expect to pay \$1,500 to \$2,000 to move an electrical panel, with replacement adding another \$1,150 if your existing box needs upgrading. NEC Article 408 covers switchboards, switchgear, and Panelboards installation and applications. Many homeowners consider moving their breaker box for reasons such as home renovations, converting unfinished spaces, or addressing. Wherever you may want to place your circuit box, you must follow the electrical panel mounting requirements dictated by the NEC (National Electrical Code). For the sake of brevity, The National Electrical Code outlines that a breaker box must be installed in an area that provides clearance around. You need at least 3 feet of open space in front of the box. The box should be between 4 feet and 6 feet 7 inches high.
