

What to do if there is no light on the fiber optic port of the switch

Overview

Check for any lights present on the unit. If there are no lights, please check the unit for power by examining both ends of the power cable, ensuring the cables are plugged in, and the power button is pushed in rather than popped out. You may also need to verify that the outlet is. This document describes how to troubleshoot fiber optic interfaces by addressing some of the fiber optic module and cabling specifications. Tip #2: Why the LED of the switch slot does not light up after inserting the transceiver?

It may cause by two reasons: compatibility issues and physical connection issues. If you have not inserted the SFP/SFP+/ XFP transceiver module into the switch slot correctly, it or link loss. The first thing. Do not look straight into an SFP light transmitter hole while it is inserted into a switch.
