

# Which type of cable tray is better for distribution boxes

## Overview

Each tray type has specific advantages, limitations, and ideal applications: Ladder trays – best for heavy power cables and long runs where airflow is essential. Cable tray systems are engineered support structures designed to route, support, and protect insulated electrical cables used for power distribution, control, instrumentation, and communication. There are several types of cable trays, including ladder, perforated, solid bottom, basket, and channel trays. Rather than enclosing cables inside conduit, cable trays provide an open, ventilated support system that allows: Because of this flexibility, cable trays are commonly used in. What type of cable tray should be used for the main runs of a cable tray wiring system?

The cable tray types to choose from are ladder, ventilated trough, or solid bottom. This guide will help you choose the best cable tray.
